9939392469|Bangalore, Karnataka, India -560048

Education

Indian Institute Of Technology — Dhanbad, India
Bachelor of Technology in Computer Science and Engineering; OGPA: 8.51 — *July 2016 - July 2020*

Relevant Coursework: Data Structure and Algorithms, Machine Learning, Database Management Systems, Operating Systems, Computer Networks, Managerial Economics, Object-Oriented Programming, Statistics and Applied Mathematics

Shivam International School — Patna, India
CBSE Higher Secondary Examination; Percentage: 92.4% — *2014 - 2016*

D.A.V. Public School — Patna, India
CBSE Secondary Examination; CGPA : 10 — *2013 - 2014*

Professional Experience

ITILITE Technologies Private Limited — Bangalore, India
Software Engineer — *Feb 2023 - Present*

- **Automated Flight and Hotel Booking with Cancellation System**: Designed and implemented backend system for fast search and modern UI for the corporate travel industry. Worked on various stages of the project, from **refining search results and user selection to seamless payment and booking processes**. Leveraged a tech stack featuring FastAPI, Python, Java, MongoDB, Kafka, OpenSearch, PHP, and multiple AWS services, including ECS, Fargate, S3, and Lambda Functions.
  - ***Enhanced search result performance by 100 percent***, both in terms of number of results as well as time taken to show results.
  - Implemented ***Rewards, Travel Credits, Dynamic filters, Automated Cancellation*** enriching the product experience.
  - ***Catapulted the automated booking success rate by an impressive 98 percent***, minimizing the need for manual intervention to negligible levels.
  - ***Triumphant product launch in the US markets***, leading to a substantial and exponential surge in company revenue.

Amazon Inc — Hyderabad, India
Software Engineer — *Oct 2022 - Feb 2023*

- **End to End Customer Solution** : Designed and implemented an end to end solution for Invoice Generation and Payments System to third party customers. **Highly scalable, handles about 1 million invoices per month** . Used Java, AWS, Spring Framework.

Jaguar Land Rover India Limited — Bangalore, India
Software Engineer — *Oct 2020 - Oct 2022*

- **Artificial Intelligence**: Built Infotainment Screen Validation AI Engine in Python from scratch that is scalable and robust. Engine **cut short organization's expenditure** by significant percent. Efficiency and quality of Image Processing and **validation increased by 15%**. Used Linux-based ECU interaction, OpenCV, YOLOv3.
- **State of the art Design and Infrastructure**: Engineered **highly optimised and light-weight Cloud based** website. Implemented Data Models, multiple Rest API functions, caching and deployment of website as a Cloud Run on GCP. Solved multiple use cases including hiring at JLR, **most optimally and intelligently**, saving tons of money for organization. Used Python, Django, Rest APIs, Data Models, MySQL, GCP, Gitlab CI/CD pipeline.
- **Automation**: Developed and Deployed a Global Test Reporting Dashboard that drastically optimized Test Reporting especially during product/feature release. Used Cloud Functions, BigQuery, Cloud Storage, Docker and Containers, Selenium, Compute Engine.

Samsung Research — Bangalore, India
Software Development Engineer, Intern — *May 2019 - July 2019*

- **Next Generation 5G Technology**: Optimised Network Protocol for 5G Communication Devices. Improved the speed of TCP Downloading and TCP Uploading. Designed an application for Server-Client communication to research the parameters and then proposed the optimal range for value of parameters that should be used to maximize bandwidth of TCP connection.

Projects

- **Structural Encoding of large networks with the help of Prufer Sequence based representation of Graphs** :
  - **Abstract:** Implemented algorithms for encoding of large Graph networks using a linear size sequence of integers, thus making it suitable for machine learning framework. **Skills/tools:** Networks, Python, C++, Netlist Circuits
- **Dynamic MR Image Reconstruction using CNN** :
  - **Abstract:** Diagnostic Image was constructed from the under sampled data in Time domain. The Input Image was in 3D with 1D as Time series Generated by combining data from different receivers. **Skills/tools:** CNN, Tensorflow, Numpy, Keras, Python

Skills

- **Languages**: C++, C, Python, Java, Spring Framework, SQL, HTML, PHP(Basics), FastAPI, Docker and Containers, Automation Desk
- **Tools and Libraries**: Django, Rest API Framework, MySQL, Cloud Functions, BigQuery, Cloud Storage, Selenium, Compute Engine, Cloud Run, Numpy, PyTorch, Linux based ECU interaction, OpenCV, YOLOv3, MongoDB, Kafka, OpenSearch, AWS services including ECS, Fargate, S3, and Lambda Functions. etc.
- **Massive Open Online Courses (MOOCs)**: Machine Learning by Stanford University(CS229) , Neural Networks and Deep Learning(Coursera).
- **Soft Skills**: Goal oriented, Hard Working, Leadership skills, Team Player, Optimistic.

Positions Of Responsibility & Achievements

- ***Solved over 400+ questions of programming*** on various platforms and online judges
- ***Consistently recognized with Outstanding feedback*** in annual performance appraisals.
- ***1 in 2 candidates selected by Jaguar Land Rover at its pan India Placement Drive for IITs only***
- ***Successfully qualified to 5th round of " Google Foobar Challenge. ", prestigious Coding Challenge***
- ***Former Coordinator*** at Abhay Dramatics Club, *IIT(ISM) Dhanbad*
