PROFESSIONAL PROFILE

IT Application Support professional with **8+ years of experience** supporting business-critical applications in the **Lending and NBFC domain**. Strong hands-on experience in **L2/L3 production support, incident management, problem management, application monitoring, SQL/database troubleshooting, RCA, SLA management, UAT/SIT, defect validation, production deployment support and stakeholder coordination**. Experienced in supporting **Salesforce, Loan Origination Systems (LOS), Loan Management Systems (LMS), INDUS, Epik and BR.Net**. Adept at working with business users, branches, backend, development, infrastructure and operations teams to restore services and improve application stability.

KEY PROFESSIONAL STRENGTHS

- **Production Support:** L2/L3 troubleshooting, application monitoring, transaction validation, user/branch issue resolution and service restoration.
- **ITSM & Incident Management:** Incident prioritization, severity assessment, SLA tracking, escalation, RCA, recurring-issue analysis and preventive actions.
- **Lending Applications:** Salesforce, LOS, LMS, INDUS, Epik and BR.Net with understanding of lending workflows and application transactions.
- **Database & Technical Analysis:** SQL queries, data retrieval, data validation, backend coordination and investigation of application/data issues.
- **Testing & Release Support:** UAT/SIT execution, test scenario preparation, defect identification, fix validation and production readiness support.
- **Process Improvement:** SOPs, troubleshooting guides, FAQs, knowledge management, issue trend analysis and automation opportunities.

PROFESSIONAL EXPERIENCE

DEPUTY MANAGER – IT APPLICATION SUPPORT ANALYST

Vistaar Financial Services Pvt Ltd, Bangalore | Apr 2023 – Present

- Provide **L2/L3 production support** for business-critical applications and support day-to-day application operations.
- Support **Salesforce** for lending workflows, application transactions, user access/issues, business-process issues and production incidents.
- Support **LOS and LMS applications**, including INDUS and Epik, and troubleshoot workflow, transaction and data-related issues.
- Monitor application operations and proactively identify incidents, failures and service-impacting issues.
- Analyze and prioritize incidents and service requests based on **business impact, urgency and SLA requirements**.
- Use **SQL/database queries** to retrieve and validate data, investigate application issues and support technical root-cause analysis.
- Perform detailed **RCA** for recurring incidents and coordinate preventive/corrective actions to improve application stability.
- Execute **UAT and SIT** scenarios, identify functional/technical defects, validate fixes and provide production-readiness confirmation.
- Coordinate with **backend, development, infrastructure, branch and business teams** for end-to-end incident resolution.
- Support production deployments by validating application behavior, transactions and business scenarios after implementation.
- Create and maintain **SOPs, troubleshooting guides, FAQs and knowledge documents** to improve support consistency.
- Identify process improvement and automation opportunities and develop automation scripts to reduce manual intervention and repetitive activities.

SENIOR EXECUTIVE – IT APPLICATION SUPPORT ANALYST

IIFL Samasta Finance Limited, Bangalore | Jul 2018 – Mar 2023

- Provided application support for **business users, branches and lending operations**, resolving production issues within agreed timelines.
- Managed application incidents and service requests, performed initial technical analysis, prioritized issues and coordinated resolution.
- Supported **LOS/LMS lending workflows** and investigated application failures affecting day-to-day business operations.
- Performed **SQL-based data retrieval, validation and analysis** to support troubleshooting and incident investigation.
- Executed UAT scenarios, identified application defects, coordinated with technical teams and validated fixes.
- Worked closely with backend and cross-functional teams to troubleshoot application failures and deliver technical solutions.
- Maintained incident information, troubleshooting procedures and support documentation for operational continuity and knowledge sharing.
